

## **CRYSTALS IN URINE**

### **MEDICAL DISCLOSURE FOR CRYSTALS IN URINE**

This pet has a history of urinary crystals. Some pets are prone to forming crystals and may require life-long prescription food to prevent/reduce formation of additional crystals. They will also require regular checks of the urine with their veterinarian to make sure crystals are not present. If left untreated, crystals can cause irritation and inflammation of the urinary bladder, predispose pet to urinary tract infections, and potentially develop into bladder stones. All follow-up care will need to be done at the owner's veterinarian and at the owner's expense.
