

DEAFNESS

MEDICAL RELEASE FOR DEAFNESS

It is suspected that this pet is deaf. While in our care, we have observed this pet sleep through very loud surroundings and does not respond to a loud noise just behind its head. It is recommended to approach pet when it is sleeping by stomping feet as a soft touch can be startling when in deep sleep. Always have your pet on leash or contained when outdoors because if startled, it may run and won't be able to hear you calling for it. Otherwise, no other expected care is needed. Any future diagnostics and treatments are to be done at the owner's veterinarian and at the owner's expense.
