

## **FRACTURE**

### **MEDICAL DISCLOSURE FOR FRACTURE (HEALED)**

This pet came into the shelter with a fracture. The pet was treated with a splint and/or activity restriction, and the fractures are well-healed at this time. While the fractures may not be causing any clinical signs at this time, it is possible the pet could develop arthritis in those areas as they age and require medications to keep comfortable.. It is recommended to keep pets at a healthy lean weight to not put additional strain on the bones and joints. If the pet appears painful or becomes lame, an examination with your veterinarian is recommended. All follow-up care will need to be done with the owner's veterinarian and at the owner's expense.
