

## **OBESITY**

### **MEDICAL DISCLOSURE FOR OBESITY**

This pet is overweight. Obesity is an unhealthy condition for any pet. Obesity can lead to arthritis in the hips, knees, and elbows. Obesity can also lead to difficulties breathing, more strain on the heart, and decreased energy for the pet. Some studies suggest it may increase the chances of diabetes in pets. Obesity can be rectified with a proper diet and exercise program. A consultation with the owner's regular veterinarian is recommended for a proper weight loss and exercise regimen. All follow-up care will need to be done at the owner's veterinarian and at the owner's expense.
