

PICA

MEDICAL DISCLOSURE FOR PICA

This pet has shown interest in eating non-food items and is therefore at risk for having gastrointestinal foreign body obstruction which could require an abdominal surgery. It is important for the owners to dog-proof the house and keep away household items, human medications, electrical cords etc. that pet may ingest and cause him harm. Toys that are small enough to swallow, have stuffing, squeakers, and small breakable parts are also not recommended. If this pet is a puppy, there is a chance that this pet may outgrow this condition, but until then owners need to be extremely cautious. All follow-up care will need to be done at the owner's veterinarian and at the owner's expense.
