

SENSITIVE STOMACH

MEDICAL DISCLOSURE FOR SENSITIVE STOMACH

This pet has had intermittent diarrhea while at the shelter. A fecal float was performed to rule out gastrointestinal parasites. This pet has been doing well on a prescription gastrointestinal diet, which may need to be continued long-term to prevent recurrent diarrhea. It may be best to avoid treats and other types of food that could cause an upset stomach. It is recommended to have your new pet evaluated by your veterinarian to determine the right course of action for your pet. All follow-up care will need to be done at the owner's veterinarian and at the owner's expense.
